

Customer Intelligence AI - Executive Demo Script

Presenter: ACL Digital

Audience:

Before you begin

- Open the dashboard in full screen; hide browser bookmarks and unrelated tabs.

- Start on

Outcome headline to repeat: One place to see subscriber health, act on churn and revenue, and govern AI recommendations-from leadership view to frontline action.

1. Opening - frame the business problem (2 minutes)

Good [morning/afternoon]. Thank you for your time.

Most communications organizations already invest in CRM, billing, care, network operations, and digital analytics. The gap is not data-it is decision speed. Leaders still reconcile spreadsheets; retention teams justify actions after the fact; marketing discovers segments months late; and digital friction shows up only when call volume spikes.

Customer Intelligence AI is designed to close that gap. It extends traditional Customer 360 with behavioral and predictive intelligence, and it prepares you for governed autonomous action-always with human approval where it matters.

What you will see today is not another dashboard. It is a command layer that answers three questions executives care about every week:

1. Are we healthy? Subscriber health, network experience, engagement, and revenue signals in one view.

2. Where

Let's walk through how that works in practice.

2. Platform story - four intelligence layers (1 minute)

(Optional: point to the layer strip on the KPI Dashboard.)

We organize capability in four layers-each builds on the last:

Layer | What it delivers | Business outcome

1 - Tradition
and sales

Today's demo focuses on layers 1-3 in depth, with a preview of layer 4 on the roadmap.

3. KPI Dashboard - executive command view (5 minutes)

Navigate: Command -> KPI Dashboard (if not already there).

This is the Customer Intelligence Command Center-the screen we expect a regional president or functional leader to open first.

Say:

"At a glance you see customer health, high-tier churn exposure, revenue opportunities, network quality of experience, ARPU, scale, digital engagement, and active AI alerts-all filterable by segment, region, period, and line of business."

Actions:

1. Briefly scan the Executive KPI strip and note sparkline trends: "Trend context without opening five different tools."

2. Change

Outcome line: "This replaces the Monday morning patchwork of reports with one prioritized agenda."

4. Customer 360+ - unified subscriber truth (3 minutes)

Navigate: Command -> Customer 360+.

Say:

"When someone asks 'what's going on with this account?'-care, sales, or retention-we need one answer, not four systems."

Walk through:

1. Subscriber profile - health, sentiment, products, masked devices.

2. AI sum

Outcome line: "Shorter handle time, fewer escalations, and retention conversations grounded in fact."

5. Behavior Intelligence - digital friction and intent (3 minutes)

Navigate: Command -> Behavior Intelligence.

Say:

"Digital is where subscribers decide to stay or leave-often before they call. This module is for product, digital, and marketing leaders who own self-care and acquisition."

Highlight:

1. Self-care heatmap - where attention and friction concentrate.

2. Intent c

Outcome line: "Find and fix the journeys that leak revenue and drive contacts-before churn models fire."

6. Customer Journey Explorer - conversion and drop-offs (2 minutes)

Navigate: Command -> Customer Journey.

Say:

"Journeys for new line, plan change, and fixed wireless signup share one stepper. Drop-offs are visible on the path and in the data."

Highlight:

1. Interactive journey map - steps and conversion percentages.

2. Conver

Outcome line: "Growth and product teams align on the highest-leverage fix, with estimated lift-not opinion."

7. Predictive suite - churn, opportunity, communities (5 minutes)

Churn Intelligence

Navigate: Predictive -> Churn Intelligence.

Say:

"Retention is under scrutiny for cost and compliance. Explainability is not optional."

Highlight:

1. Churn watchlist - risk, likelihood, ARPU impact, recommended offer, SLA.

2. Explain

Outcome line: "Save the right subscribers at sustainable cost-with defensible reasoning."

Opportunity Finder

Navigate: Predictive -> Opportunity Finder.

Say:

"Growth is prioritized by AI-ranked potential-cross-sell, upsell, bundles-not by whoever shouts loudest in the room."

Highlight: opportunity cards, priority, revenue potential, View explanation / Assign.

Outcome line: "Marketing and sales work from the same ranked pipeline."

Hidden Communities

Navigate: Predictive -> Hidden Communities.

Say:

"These are behavioral communities discovery finds-streamers, travelers, family decision makers-not segments you already codified in CRM."

Highlight: community cards (population, revenue, risk, growth), size over time, Export to campaign.

Outcome line: "New segments become campaigns in days, not quarters."

8. Autonomous layer - roadmap preview (1 minute)

Navigate: Autonomous -> AI Copilot, AI Agents, or Executive Command Center.

Say:

"What you see here is on our roadmap for this release. In production, the copilot answers executive questions in natural language with citations; agents execute approved playbooks for pricing, care, and campaigns; and the Executive Command Center is the board-ready rollup of everything we showed today."

Do not over-demo stub screens. Acknowledge them as the path to governed automation.

Outcome line: "Scale intelligence without scaling headcount-under policies you define."

9. Close - outcomes, partnership, next steps (2 minutes)

Summarize outcomes:

Capability | Executive outcome

Command C

Say:

"ACL Digital brings this to life as part of the ALTEN Group-design-led engineering, data and AI at scale, and deep experience in communications and digital transformation. We typically start with a focused pilot: integrate your CRM, billing, network, and digital feeds; stand up the command center and one predictive module; measure churn save, conversion lift, or contact reduction over 90 days."

Suggested next steps to offer:

1. Discovery workshop (1 day) - data sources, KPI definitions, governance model.

2. Pilot sc

Close:

"Thank you. What would be most valuable for your organization in the next quarter-retention, digital conversion, or unified customer view?"

Appendix A - Filter demo cheat sheet

Use one deliberate filter change on the KPI Dashboard:

- Segment: Consumer -> Enterprise (or reverse)

- Region:

Line: "The same platform serves consumer and enterprise, or regional operating models, without rebuilding reports."

Appendix B - Likely executive questions (short answers)

How is this different from our BI tool?

BI reports
